

Starboard sectors

Same eight wedges, same geometry — they are signed to windward, so they already flip with the tack. What changes on starboard is the **rights**, and therefore what each sector is worth. Both of these are now built: the tool picks the table off your own tack, live, as you tack. Each wheel is drawn as seen from above with the wind blowing down the page and the boat close-hauled at 45° to it — on port the bow leans **RIGHT** and the wind comes over the port side; on starboard the bow leans **LEFT**.

Sector	Where	On port	On starboard	Why
A	windward bow	MEDIUM	THREAT ▼	right in front and above — we can see them and they are going away from us. The least of it
B	windward, forward of the beam	THREAT	THREAT	above and forward, but still ahead of the beam — they have to get aft of us before they can use the height. The pressure starts at C

C	windward quarter	THREAT	CRITICAL ▲	ABOVE AND BEHIND — the boat that can bear down on us with nowhere for us to go. Rights do not help here
D	windward, astern	MEDIUM	CRITICAL ▲	the same, further aft. The starboard pair that flashes
E	on our transom	CRITICAL	MEDIUM ▼	the transom stops being the hook once we hold rights — still worth naming, no longer the thing to watch
F	leeward quarter	THREAT	THREAT	unchanged
G	leeward, forward of the beam	THREAT	THREAT	unchanged
H	leeward bow	DANGER	THREAT ▼	they cannot make us give way, and we are above them

The pattern is a quarter turn. On port the danger is **aft and to leeward** — the hook on our transom, the boat under our bow that can luff us. On starboard it is **above and behind**: C and D, the boats that can bear down on us where being the rights boat buys us nothing. Everything the rights DO cover drops away — the transom, the leeward bow, both windward bows all fall to the bottom two levels.

CRITICAL flashes, on either tack. The **+20°** sliver is a port-tack thing only: there the critical zone runs from +20° round the transom to −45°, taking all of E and just the inner edge of D. On starboard D is critical end to end and needs no exception.
